- Implement RazorPay Payment Gateway into Company Website.
- Visualize Interview Video Ratings using D3.js .
- Implement Design Changes and Add Webpages for Edit Profile, Delete Profile and much more .

PERSONAL PROJECTS

•**Turf Review System (AirBNB Clone)**

A website to view and add football turfs, provide ratings, store user details, integrates map APIs and user authentication.

- Tools & technologies used: NodeJS, React, MongoDB, Mongoose, Express, Material UI, JWT
- Turf Review System to add turfs, view already added turfs(with geolocation & map APIs), leave reviews and ratings, user authentication and authorization using JWT.

•**Microservice Inventory Management (RabbitMQ)**   *Mar 2024 - Apr 2024*

Backend Inventory System using Node.js, MongoDB, RabbitMQ, and Docker.

- Tools & technologies used: Node.js, RabbitMQ, MongoDB, Express, Docker, Mongoose
- The project is made up of a producer and four consumers. The producer sends messages to an exchange which then routes the messages in the appropriate queues. The queues connect to their respective consumers which all perform various database operations for adding/updating/deleting,reading data.

•**Spotify Playlist Generator**   *Jul 2024 - Aug 2024*

Playlist Generator made using React, Tailwind CSS and the spotify API.

- Tools & technologies used: React, Tailwind CSS, Spotify API
- Provides users with two options to create playlists. Users can create a playlist using the top tracks of their top artists or create a playlist using the top tracks of selected artists.

•**MERN Stack Chat App**   *Mar 2024 - Apr 2024*

Chat Application made using ReactJS, MongoDB, Express, NodeJS, socket.io, JWT

- Tools & technologies used: ReactJS, MongoDB, Express, NodeJS, socket.io, JWT
- Project Implements:
  -> One on One chatting
  -> Group Chatting
  -> Cloudinary API to store images
